# Gold Star Blend

## Perennial Ryegrass

### *Perennial Ryegrass Blend*

**Sow Rate: 5 to 10 pounds per 1,000 sq. ft. Or 200 to 400 pounds per acre**

A blend of perennial ryegrasses. Known on many professional football, baseball, soccer and rugby playing fields. It is also found on golf course fairways. Superior in any situation where traffic and rough use is the primary concern. Excellent recuperative capabilities.

**Gold Star** will grow in sun or

moving shade, is heat and cold tolerant and shows drought tolerance after complete establishment. Fast to germinate with aggressive growth that restricts weeds.

This fine textured, dwarf-type perennial ryegrass may be mowed from 1 to 2 inches, using a sharp mower blade. Supplemental water

and regular fertilization will maintain this beautiful grass at it's best. Prefers a soft loam, however it is adaptable to sand or heavy clay soil and survives in less than perfect conditions.

Endophytes are an added benefit to turf (lawn) mixtures. **Gold Star** is resistance to crown rust, stem rust and leaf spot.
