- ✓ Endophyte enhanced
- ✓ Tolerates low mowing
- ✓ Dwarf type with low growth habit
- ✓ Shade tolerant

**Seeding rate:**  
7 to 10 lbs per 1000 sq. Ft.  
**Over seeding rate:**  
4 to 5 lbs per 1000 sq. Ft.

**Rescue Fescue Plus RF** is the most advanced tall fescue blend on the market. If you want a dark green, full turf that has the ability to repair itself of worn or damaged areas, then you only have one choice, **Rescue Fescue Plus RF**. **Rescue Fescue Plus RF** is a special blend of two dwarf turf-type tall fescues and one rhizomatous tall fescue (RF). This premium blend will display excellent germination, growth and color. **Rescue Fescue Plus RF** will become green earlier in the spring and stay green longer in the fall. If your lawn gets heavy use and portions of the lawn thin, RF will send out new rhizomes and fill in the

bare or thin spots to give you a healthier and thicker turf. Traditional tall fescue grasses will clump together, not filling in the bare spots and producing an uneven lawn. With bare spots, weeds are apt to take over the lawn. What makes "RF" unique is its ability to fill in the areas with rhizomes, knitting the lawn together. RF's rapid germination ensures quick establishment of your new lawn. While over seeding an existing lawn the quick germination allows RF to compete successfully with the old turf, eliminating the clumps and bare spots forever.
