ForageKing BMR Hybrid Sorghum X Sudangrass

*Multiple harvests of
Highly digestible forage*

Seeding rate:
50 lbs per acre irrigated
25 lbs per acre dryland

Performance

- Warm-season, summer annual for multiple harvests as pasture, hay or silage.
- Carries the brown mid-rib gene for improved forage quality, palatability and animal intake over non-BMR hybrids.
- Excellent drought tolerance for low rainfall areas.

Management

- Adapted to all areas of the U.S.. Where hybrid sorghum X sudangrass or hybrid sudangrass is grown
- Plant after the danger of frost and soil temperatures exceed 65 degrees.
- Leave a 3 to 4" stubble at harvest and apply 1 to 1.25 pounds of actual nitrogen for each day to the expected next harvest.
- Follow all sorghum feeding precautions.

Appearance at Harvest Maturity

- Wide, showy leaves with the characteristic brown mid-rib coloring. Usually chest-high before head extension.
