Front Range Classic

- *Drought tolerant*
- *Exceptional dark green color*
- *Excellent wear tolerance*
- *Heat and cold tolerant*

Turf Mix

The mow height may be maintained lower than regular tall fescues at 2 inches. Try not to remove more than ¼ to 1/3 of the total plant height.

Seeding rate: 5 to 7 lbs per 1000 sq. Ft.
Over seeding rate: 3 lbs per 1000 sq. Ft.

Fastest germinating mix available!!

33% Kentucky Bluegrass
33% Rhizomatous Fescue
34% Fine Fescue

***ALL THREE OF THESE VARIETIES
GERMINATE AT THE SAME TIME.***

A gorgeous, dark green blend of the new and award winning dwarf-type fescue. Lower growing and finer bladed than the non-dwarf varieties. ***Front Range Classic Turf Mix*** builds a dense turf with prolific root systems. It resists drought and tolerates both heat and cold. Once you plant, it stays in the ground. Very little over seeding is necessary.

This excellent blend is made of an improved and elit-type of Kentucky Bluegrass. The cultivars in this blend are all fine-leaved and genetically dark green in coloring. They are fast to germinate with excellent seeding vigor. Highly disease resistant even in humid areas.

This blend is very drought tolerant because the grasses have been bred to reach dormancy from lack of irrigation very slowly. Once water is applied, they are the quickest to recover. This gorgeous blend withstands foot traffic, even sport fields.

All the cultivars are rated high in tests for their excellent winter color. They form a strong, aggressive and dense sod that remains persistent even under low-maintenance conditions and low-fertility soils. ***Front Range Classic Turf Mix*** has a very high resistance to leaf rust, spot and fusarium blight.
