HayKing II *Hi-Gest® BMR* *Hybrid Sudangrass*

Improved Animal Performance

Seeding rate:
50 lbs per acre irrigated
25 lbs per acre dryland

Performance

- Low-lignin content increases digestibility in live-stock rations.
- Warm-season, summer annual with seasonal dry-matter tonnage equal to corn silage as silage, pas-ture or hay.
- Low-input requirements and an efficient user of nitrogen and water, with few weed or pest con-cerns.
- Superior forage quality versus BMR hybrid sorghum X sudangrass with reduced prussic acid.

Management

- Adapted to all areas of the U.S.. Where hybrid sorghum X sudangrass or hybrid sudangrass is nor-mally grown.
- Plant after danger of frost and soil temperatures exceed 65 degrees.
- Fine stems, leafy and aggressive tillering after har-vest. Leave a 3 to 4" stubble.
- Follow all sorghum feeding precautions.

Appearance at Harvest Maturity

- A fast-growing hybrid with very fine stems, ag-gressive tillering and a mass of leaves with the characteristic brown mid-rib coloring. Usually chest high before head extension.
