

Sandhills Sainfoin

225 NW Frontage Rd
Ft. Collins, CO 80524
888-603-7333 or 970-419-3309

If a picture is really worth a thousand words, then you need to study this photo. This field is 10 years old, is frost tolerant, produces premium quality hay or graze, disease resistant and it produces better beef, 10% on average more milk and it costs less to maintain than ALFALFA!

Sow Rate:

40 lbs per acre irrigated
25 lbs per acre dryland

Seeding depth"
¼ to ½ inch

Poudre Valley Co-op is excited to introduce an incredible forage for cattle "Sandhills Sainfoin." For grazing, silage, or hay.

Sandhills Sainfoin will produce a higher quality beef or milk at a lower cost with long-term, high yielding forage. **Sainfoin**, a healthy, wholesome forage, no-bloat legume with a hollow stem and high sugar content is preferred by all classes of livestock.

Field testing has shown remarkable gains over alfalfa in almost every field condition. **Sainfoin is non-bloating, thrives at higher elevations, is more palatable to cows.**

Sainfoin can produce 10 percent more milk for the simple reason that cows will eat 10 percent more due to superior palatability, no bloat, and high RFV's (near 200 RFV), bud through bloom.

Do you experience these problems: *Frost or winter kill, weevils or aphids, bloat or poor palatability and/or short on net return?*
Poudre Valley Co-op has a solution for you!

Isn't it time for you to take a serious look at **Sandhills Sainfoin?**
Why not?
