# Snake Creek Forage Mix

*40% Tango Smooth Brome  
40% Crown Royal Orchardgrass  
20% PV Perennial Ryegrass*

*Sow Rate:  
25 to 30 pounds per acre*

Poudre Valley is proud to introduce a new regional forage grass: **Snake Creek Forage Mix**. The components of this mix are: Forage Perennial Ryegrass, Crown Royal Orchard Grass, and Tango Smooth Brome-grass. The genetic base of these three grasses originated in Hungary and Romania. They have proven to be both winter hardy and drought resistant. If you want the ultimate in both production and palatability, contact the leader in cutting edge forage genetics.

Designed for pastures that receive supplemental irrigation. Mixed with perennial sod forming and bunch type grasses.

Grows in average to heavy soils, slightly acid to slightly alkaline (ph 5.5 to 7.5). **Snake Creek Forage Mix** is cold and heat tolerant due to its deep root system.

Superior palatability and digestibility with abundant, leafy forage that recovers quickly from grazing. Use rotation, or paddock grazing systems.

Eliminate weeds, plow the soil, adding fertilizer as needed, sow and cover the seed; seeds should be kept moist throughout germination. After establishment, irrigate as needed.
