888-603-7333 or 970-419-3309

Three - L Forage Mix

34% Tango Smooth Brome
33% Crown Royal Orchardgrass
33% Bull Tall Fescue

Sow rate:
30 pounds per acre

Poudre Valley introduced **Three - L Forage Mix** last year. It is very similar to the Snake Creek product, but instead of using a ryegrass component, it uses Bull tall fescue that handles higher PH levels and does well on river bottom and other locations where that is a problem. It retains the Crown Royal orchardgrass as well as the Tango brome grass. This mixture will tolerate extremely hard grazing, in fact the

harder you graze it the better it does.

Designed for pastures that receive supplemental irrigation. Mixed with perennial sod forming and bunch type grasses.

Grows in average to heavy soils, slightly acid to slightly alkaline. **Three - L Forage Mix** is cold and heat tolerant due to its deep root system.

Superior palatability and digestibility with abundant, leafy forage that recovers quickly from grazing. Use rotation, or paddock grazing systems.

Eliminate weeds, plow the soil, adding fertilizer as needed, sow and cover the seed; seeds should be kept moist throughout germination. After establishment, irrigate as needed.
