# *Water-Less Turf Blend*

## *3 Way Fescue Blend*

**Sow rate: 5 to 10 pounds per 1,000 sq. ft.**

**Water-Less** is a special blend of Turf Type Tall Fescue selected for superb color, texture, disease resistance and mow ability. Its deep root system enables **Water-Less** to tolerate drought and heat exceptionally well. Your **Water-Less** lawn will grow

beautifully, in sun or shade, allow you to mow close and decrease your lawn maintenance. Best of all, you'll use substantially less water to maintain the richness of a typical **Water-Less** lawn.

### **Planting your new Water-Less Lawn**

1. Clear all trash and debris from planting area. Till your soil to a depth of 4 to 6 inches, adding a balanced lawn fertilizer at the recommended rate. Level the ground
2. Grade to drain water away from buildings. Roll lightly.
3. Rake lightly to form small furrows.
4. Mix seed thoroughly at 5 to 10 pounds per 1000 square foot. Sow by hand or with a seeder. Rake lightly at right angles, to your furrow to thinly cover seed.
5. Cover your prepared seedbed with a thin cover (no more than ¼ inch) of peat moss or weed free humus. Roll.
6. Water three to four times daily to keep soil moist at all times. Use a fine spray and don't let water puddle. After your new **Water-Less** lawn is established, follow normal watering procedures.

### **Re seeding an established lawn**

Mow your lawn as short as possible. Rake thoroughly to expose soil, removing any debris or dead grass. Sow seed and cover with no more than ¼ inch of peat moss or weed-free humus. Roll. Use a fine spray to keep moist until new seeds are established, then resume normal watering procedures.
